

ADA Requirements for Self Storage Facilities

Please note: Facilities are Not Grandfathered in.....

Ramp Specs

Ramp is full width of the door opening. It fills in the weather ledge recession. It is 1 inch tall and 9 inches long.

What type of material?

Ramp material is G90 galvanized 16 gauge prime steel

What is the ratio of slope?

1' rise in 9" run = 1-5/16: 12 slope

This is within the guidelines - as they state:

"An ADA wheelchair ramp may have a slope of 1-1/2:12 to 1-3/16:12 ratio, but not for a rise of more than 3 inches"

How is it installed?

It lays in place in the weather ledge. When the door is down, it cannot be removed.

Explain the handles....how far does it extend down (measurements)

All handles must be within 15 inches above the floor and no more than 48 inches high. The exterior handle is best at the 15 inch height. This allows for a full range upward to roll up the door.

The interior handle hangs down around the 40 to 48 inch area to grab and pull the roll up door down (close).

How to order?

www.storagedisabilityproducts.com

Measurements needed for ramp?

Yes. Need measurements to ensure best fit possible.

Delivery time period?

Approximately 2 weeks.
